ALASKA WHITE

GRANITE

BRAZIL

ALASKA WHITE

Description

Imported from Brazil, one of the worlds largest natural stone exporter, the Alaska White is mainly composed of feldspath and quartz. Rust coloured veining can be present on certain slabs due to the oxidation process that takes course over millions of years. Alaska White is a beautiful mix of pale whites and silvers, with warm neutrals and amber tones, to the image of Brazil, a country that offers its visitors not only a fascinating culture, but a geodiversity that enables it to produce a stone like the Alaska White. Whether it be for counters or vanities, this beautiful stone will be sure to enhance its surroundings.

In the course of the polishing process, an epoxy resin is applied to the surface of the stone to fill part of the stone's porosity (or pores) and natural cracks that may be apparent. This has no incident on the the durability, the maintenance or the beauty of the natural stone. It is possible that certain pores be too small to contain efficiently the resin, and reopen during the finishing stages. However, this does not affect the stone's quality or appearance. Such as it is the case with any natural stone, it is recommended to apply a sealer to extend its beauty through time.

VARIATION **3**

LAYOUT

Because this stone has a lot of movement and can vary from one slab to the other, in order to manage your customer's expectations better, we recommend that you reserve your slab online and proceed with a layout approval when you place your order.
